

SAFE | HEALTHY | RELIABLE

We need Electric School Buses!

An electric bus saves \$25,000 in annual fuel costs.

Lower operating costs-- 19 cents per mile vs. dieselbuses 82 cents a mile

Electric buses pay for themselves through lower maintenance costs over the life of the bus and have a longer lifespan (12-16 years).

Going to school can be hazardous

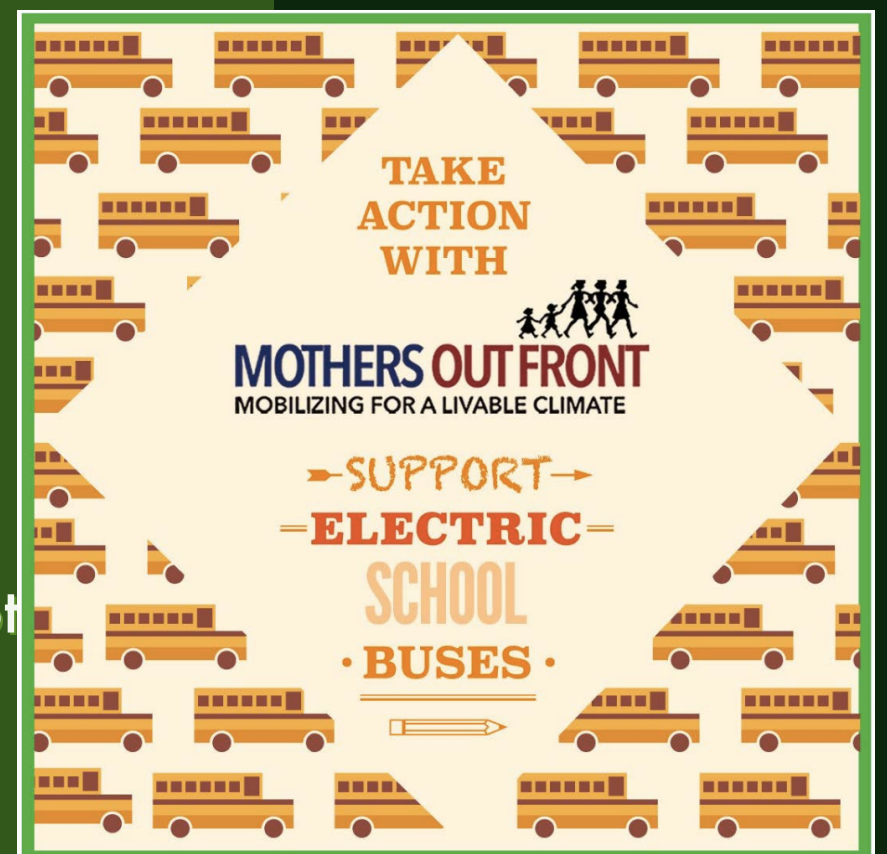

to our kids' health

Children on diesel school buses are exposed to 5 to 15 times more air toxins than the rest of the population. 24 million children travel on 454,000 school buses nationwide.

4 billion miles each year

3 billion hours on these buses.

About 90 percent of these buses run on diesel fuel annually emitting 3,000 tons of cancer-causing soot and 95,000 tons of smog-causing compounds.
